

UNICEF Education Monitoring Dashboard

Kano State Education Analysis (2024–2025)

Prepared by Umar Musa Isah
Power BI | Excel | Data Analytics Portfolio

Project Overview

This project simulates a UNICEF-style education monitoring system for Kano State using synthetic data generated with Python and analyzed in Power BI. The dashboard supports data-driven monitoring of enrollment, attendance, gender inclusion, WASH indicators and school infrastructure performance across multiple LGAs.

Project Objectives

Monitor school enrollment

Analyze attendance patterns

Evaluate gender inclusion

Track WASH access

Identify infrastructure gaps

Support decision-making

Dataset & Methodology

Table

Metric	Value
Records	7,500+
LGAs	12
Time Period	2024–2025
Tool Used	Python

Python → Excel → Power BI

Dashboard Overview

Executive Summary

Gender & Inclusion

WASH & Facilities

Key Insights

Urban LGAs demonstrated stronger attendance and enrollment performance than rural LGAs.

Girls participation improved in several communities but rural areas still showed lower inclusion rates.

Water access and learning materials remain inconsistent across schools in rural communities.

Tools & Skills Applied

Tools Icons:

Skills

- ☐ Data Cleaning
- ☐ Data Modeling
- ☐ DAX
- ☐ Dashboard Design
- ☐ Data Storytelling
- ☐ KPI Reporting

Challenges & Solutions

Challenge			Solution	
	Relationship errors		• Created lookup tables	
	Large dataset handling		• Used optimized DAX	
	Dashboard organization		• Implemented page navigation	
	Realistic simulation		• Used Python synthetic data	

Project Impact

This dashboard demonstrates the ability to transform raw education monitoring data into actionable insights for decision-making. The project reflects practical skills relevant to NGO, UN and data analyst roles.

The words "Thank you" are rendered in a 3D, gold-colored script font. The letters have a metallic sheen and a slight shadow, giving them a three-dimensional appearance as if they are floating or attached to the surface.
